

CDC MARKET BULLETIN

Market Comment

Total Demand for the twelve-month period ending July 31, 2015 was 328.67 M. kg BF, representing a minor decrease of 0.02% compared to June 2015. Note that this decrease occurred mainly due to the timing of imports last year. Demand for industrial dairy products continues to grow, as demonstrated by the increases in butterfat utilization and retail sales.

All milk classes experienced increases in BF utilization for July 2015. Leading the way was yogurt in Class 2(a) with an increase of 1 million kg of BF (13.7%) over the past year. Class 2(b) (ice cream) seems to be recovering from significant declines lately with an increase of 5.1% over July 2014. BF utilization in Class 1 has increased for both fluid milk and cream; however, the volume of fluid milk sales (Class 1a) for the 12 month period ending July 2015 is down by 1.4% compared to the same period the year before. BF usage in Class 3 (cheese) was strong in July 2015, with an increase of 7.2% over the twelve-month period ending July 2014. The butter market, which includes imports and butter stocks, remains flat over the long-term.

Comments on Stocks

Total milk production for July 2015 was strong once again, with a 6.4% increase in total deliveries over July 2014. The majority of this high production has been used to fill the strong demand for dairy products.

CDC butter stocks have improved after the unusually low numbers seen thus far in 2015. As of July 2015, CDC's Plan A butter stocks are now at 302 t while Plan B butter stocks stand at 5,716 t. The increase in Plan B butter was mainly due to a transfer from private stocks to CDC stocks. Imported butter inventories were 2.3 t as of July 2015.
