Please update the corresponding pages of your MTS Allstream AST Tariff with the attached revised tariff pages.

This update is being issued pursuant to:

- #555: Interim and final approval of changes to the rates for Megalink service
- #563: Final approval of equal access start-up costs  
1 June 2005 rate changes to category 1 competitor services.(Dec 2002-34)
- #567: Interim and final approval of 7 hour MTTR
- #568: Interim approval of VoIP 9-1-1.

If you have any questions, please contact me at (204) 941-5436 or email pat.johnson@mts.ca.

INTERCONNECTION CIRCUITS WITH TRUNK SIDE ACCESS - continued

1. GENERAL - continued

- E. When CCS7 signalling is requested, CCS7 links are required. CCS7 links refer to the DS-0 channels between the MTS Allstream's designated gateway Signalling Transfer Points (STPs) and the IXC's STPs or between the MTS Allstream's gateway STPs and the IXC's switch(es). This interconnecting arrangement may be provided by MTS Allstream, subject to the availability of suitable facilities, or by another designated incumbent local exchange carrier as determined by network design requirements, to carry CCS7 signalling information associated with interconnecting circuits with trunk side access which connect MTS Allstream to an IXC for the purposes of call set-up and take down. CCS7 links between the Company's gateway STPs and the IXC's STPs may also be used for Billed Number Screening (BNS) database access.
- F. The facility over which interconnecting circuits with trunk side access and CCS7 links are provided is furnished at the rates and charges specified in Item 302 of the National Services Tariff (CRTC 7400).
- G. In addition to the service charges associated with the tariff item referenced in F. above, the following service charges associated with the provision of interconnecting circuits with trunk side access and CCS7 links will apply for each DS-0 set. A DS-0 set is defined as a group of DS-0s which are of the same type (i.e., Feature Group D, Feature Group B or 800/888), within the same DS-1, connected at the same location and ordered at the same time.

	<u>Service Charge</u>	
Inward Order, each DS-0 set	\$755.90	*
Change Order, each DS-0 set	490.24	1

- H. An IXC STP port connection is required between a MTS Allstream gateway STP and the IXC's STP. In addition, an IXC switch to STP connection is required between a MTS Allstream gateway STP and the IXC's switch. An IXC may establish either STP to STP port connection or IXC switch to STP port connection, but not both. Since MTS Allstream does not have a gateway STP in its territory, the IXC must obtain such interconnection from another incumbent local exchange carrier.

2. NATIONAL ORIGINATION

- A. National Origination for 800/888 calling service providers permits IXCs to combine Toll-Free services and Area Code Route feature or the 800/888 calling services of another IXC with their line side or trunk side access arrangements, thereby permitting the IXCs, who do not have a national network, to offer national 800/888 calling service to their customers.

Issue Date: June 1, 2005

Effective Date: June 1, 2005

Approved in Telecom Decision CRTC 2002-34, May 30, 2002

ITEM  
40

INTERCONNECTION CIRCUITS WITH TRUNK SIDE ACCESS - continued

2. NATIONAL ORIGATION - continued

B. When IXCs wish their 800/888 calling services to have national call origination capabilities, they must also subscribe to the Area Code Route feature of Toll-free Service.

3. NETWORK CHARGES

A. When the IXC requests an interconnecting circuit with trunk side access, a switching and aggregation charge specified in 3.D. below applies to each minute of traffic carried on the interconnecting circuit.

1) When a call is blocked from the Direct Connection and, using overflow routing, is used to the IXC by means of an Access Tandem (AT) Connection, the switching and aggregation charge related to an AT Connection, as specified in D.2) below, applies for that call.

B. The switching and aggregation charge relates to all associated switching, transport and signalling functions performed by MTS Allstream at the originating or terminating end of a call, including, subject to availability:

- 1) hardware answer supervision; and
- 2) delivery of calling line identification.

C. The switching and aggregation charge is assessed on the basis of conversation minutes and is derived by multiplying the charge based on total elapsed carrier connect time by the connect time to conversation minutes ratio.

D. The following switching and aggregation charges apply for each minute of originating or terminating traffic:

	<u>Connect Time Charge</u>	<u>Ratio</u>	<u>Conversation Minutes Charge</u>
1) Direct Connection	\$0.00148(A)	1.0805	\$0.00160(A)
2) Access Tandem (AT) Connection	0.00163(B)	1.0805	0.00176(B)

E. The switching and aggregation charge specified in D.1) above will be attributed to MTS Allstream on each minute of MTS Allstream originating or terminating voice and data traffic carried over the interexchange portion of the Public Switched Telephone Network (PSTN).

Exception: This charge does not apply to MTS Allstream's traffic entering or exiting Canada on the Public Switched Telephone Network or to traffic originating or terminating on Direct Access Lines (DALs) associated with MTS Allstream's services. A MTS Allstream DAL is an access line dedicated exclusively to a service or services in the Competitive Toll or Competitive Network Phase III categories.

Issue Date: June 1, 2004

INTERCONNECTION CIRCUITS WITH TRUNK SIDE ACCESS - continued

4. PRIMARY INTEREXCHANGE CARRIER (PIC) PROCESSING - continued

E. In the case of the PIC selection changes which are disputed by the customer or by an IXC on behalf of the customer, the customer's PIC selection will be reinstated to the previous PIC. The IXC must then provide evidence of customer authorization as described in section 4.5 of Schedule 4 (PIC Information Processing) of the CSG Agreement. If such customer authorization is not provided within 15 business days from the date of the request from MTS Allstream, the IXC will be deemed to have requested an unauthorized PIC change, and will be assessed the unauthorized PIC change charge as specified in H.5) below. A PIC processing charge as described in D. above will also be assessed to the IXC having requested the unauthorized PIC change, to cover the reinstatement of the unauthorized PIC to the previous PIC selection.

F. To enable the IXC to validate or place PIC subscription orders at the Working Telephone Number (WTN) level, the IXC may request and obtain from MTS Allstream a detailed record transaction in CARE format of all WTNs subscribed to a specific Billing Telephone Number (BTN). Service charges apply as specified in H.6) below.

G. To enable the IXC to perform a reconciliation between the IXC's billing records and MTS Allstream's PIC database, the IXC may request a Verification Record from MTS Allstream. Verification Record transactions are subject to the service charge specified in H.7) below.

H. PIC processing charges are as follows:

1)	Account Set-Up charge, each PIC processing account	\$ 345.12	*
2)	Changes to CARE profile, each request	86.28	
3)	User Handbook, each additional copy	43.14	
4)	PIC Processing charge, each access line	0.7059	
5)	Unauthorized PIC Change charge, each access line	30.45	
6)	BTN Detail charge, each WTN provided	0.0963	
7)	Verification Record charge, each access line	0.0963	

I. The PIC Processing charges specified in H.4) and H.5) will also be attributed to MTS Allstream.

5. Since the Bill Number Screening (BNS) database query is offered by Bell Canada on behalf of all Stentor carriers, the IXCs' BNS database queries will be provided and charged by Bell Canada.

40 INTERCONNECTION CIRCUITS WITH TRUNK SIDE ACCESS - continued

6. CARRIER NETWORK PROFILE CHANGE

- A. Prior to an IXC initially being provided with interconnecting circuits with trunk side access, the IXC is required to complete a Carrier Profile Questionnaire (CPQ) to select network and translation options. The CPQ data is subsequently programmed into MTS Allstream's switches, as required.
- B. Service charges, as outlined 8.C., apply to change the selected options and change the network translations in MTS Allstream's switches associated with each impacted Carrier Identification Code (CIC) at any time subsequent to the initial programming.
- C. The following service charges apply at each end office switch impacted by the IXC's request:

<u>CPQ Option Being Changed</u>	<u>Service Charge</u>
International Calling	\$112.01
Abbreviated Dialing No. 1	154.90
Presubscription Indication	62.58

BILLING AND COLLECTION SERVICE

1. DESCRIPTION OF SERVICE

A. MTS Allstream will provide Billing and Collection Service for eligible message toll service calls, as defined in MTS Allstream's Billing and Collection Services Agreement, which are completed over the IXC's network, at the rates specified in 3. below. Billing and Collection Service includes:

- 1) Preparation and rendering of bills for charges purchased by MTS Allstream from the IXC which are associated with eligible calls by customers of the IXC who also maintain accounts with MTS Allstream.
- 2) Collection of payments for charges associated with eligible calls made by customers of the IXC, including appropriate taxes which will be remitted by the IXC to the appropriate governments.
- 3) Answering of customer questions regarding charges billed by MTS Allstream for eligible calls provided by the IXC, excluding questions about the details of the IXC's services, rates, rate structures and similar matters.
- 4) Application of credits and adjustments to customer accounts, in accordance with billing and collection service procedures which are provided to the IXC from time-to-time by MTS Allstream.

2. TERMS AND CONDITIONS

A. The IXC must execute a Billing and Collection Services Agreement, which details the terms and conditions of the service, with MTS Allstream.

3. RATES

A. An Accounts Receivable Management discount will apply to each account receivable purchased from the IXC.

B. Accounts Receivable Management discount, as a percentage of the value of the accounts receivable purchased	<u>Charge</u>	
		1.88%

C. The following processing charges per account receivable purchased from the IXC will apply each time an account receivable is:	<u>Charge</u>	
--	---------------	--

43 COMPENSATION PER CALL

1. GENERAL

A. "Compensation per call" refers to the application of an access charge for each toll-free call from MTS Allstream's public or semi-public telephones (pay telephones) to an Interexchange Carrier's (IXC's) toll-free dialing sequence.

2. SERVICES AND EQUIPMENT

A. The compensation per call charge applies to the IXC, for each completed toll-free call that originates from an MTS Allstream pay telephone and is carried by the IXC, except in limited situations where the toll-free call cannot be captured due to technical limitations.

B. Additional toll-free calls initiated through the use of the "next call" key on the pay telephone are also subject to the compensation per call charge. However, additional toll-free calls attained through the use of dialing sequences on the IXC's platform are not subject to the compensation per call charge.

C. Toll-free calls are considered completed when the call is answered.

D. Each month, MTS Allstream will send the IXC a composite electronic list of the toll-free numbers that originated at MTS Allstream's pay telephones and were carried by the IXC. The list will include the toll-free numbers that were called and the number of times they were called in the previous billing period.

E. Call detail recording is not provided.

3. RATES

A.	Compensation for toll-free call that originates from an MTS Allstream pay telephone and is carried by the IXC, per completed call.	<u>Charge</u>	
		\$0.2188	*

DIALED NUMBER TRANSPORT CAPABILITY

1. GENERAL

A. Dialed Number Transport Capability (DNTC) is an access service that transports the toll-free number that was dialed by a caller to the switched local facilities of an Alternate Provider of Long Distance Service's (APLDS') subscriber.

2. TERMS AND CONDITIONS

A. DNTC is available to all toll-free service providers with interconnecting circuits associated with trunk-side access.

B. An APLDS's subscriber's switched local facilities must also be equipped with a compatible display device, Centrex, Call Management Service or Business Calling Line ID.

C. Only dialed number digits forwarded by an APLDS that conform to the specified signalling parameter format will be delivered.

D. DNTC service is provided subject to the availability of suitably equipped DMS-100 end-offices.

E. A minimum service interval of thirty days applies for the first DNTC service provisioned in MTS Allstream's territory.

3. RATES AND CHARGES

	<u>Monthly Rate</u>	<u>Service Charge</u>
A. The monthly rate applies to each subscriber's line or equivalent line group, equipped to receive the dialed number digits.	\$328.19	—

NETWORK ANNOUNCEMENTS FOR CUSTOMERS OF DISCONNECTED IXCS WITH  
FEATURE GROUP D SERVICE

1. GENERAL

- A. This service provides for a network announcement to be activated when an IXC with Feature Group D service is disconnected from MTS Allstream's network, or otherwise ceases to provide its customers with access to long distance services. MTS Allstream will route all calls destined for the network of the disconnected IXC to a recorded announcement. When customers attempt to place calls on the network of the disconnected IXC, the announcement will inform customers that the IXC is no longer in service and direct such customers to contact another long distance service provider to establish service and/or to obtain instructions for making immediate long distance calls via casual dialing.
- B. A once-only charge as specified in (1) below is assessed for the creation of the announcement capability. This charge is assessed to each IXC having provided to MTS Allstream, on the effective date of this tariff, an "Access Customer CARE (Customer Accounts Record Exchange) Profile" as referenced in Schedule 4 to the CSG Agreement. The charge is also attributed to MTS Allstream.
- C. Each time an IXC with Feature Group D service is disconnected from MTS Allstream's network, or otherwise ceases to provide its customers with access to long distance services, a charge as specified in (2) below is assessed for the activation of the recorded announcement. This charge is assessed to each remaining IXC having provided to MTS Allstream, on the date that the announcement is activated, an "Access Customer CARE (Customer Accounts Record Exchange) Profile" as referenced in Schedule 4 to the CSG Agreement. The charge is also attributed to MTS Allstream.
- D. Rates And Charges

BULK TRANSFER OF A CUSTOMER BASE BETWEEN IXCS HAVING FEATURE GROUP D SERVICE

1. GENERAL

- A. This service is intended for situations such as acquisitions or mergers in which one IXC with Feature Group D service (the Acquiring IXC) acquires the equal access customer base of another IXC (the Original IXC). An acquiring IXC can request MTS Allstream to convert the customer PIC selections from the Original IXC to the Acquiring IXC on a bulk transfer basis. Prior to the processing of such a bulk customer base transfer by MTS Allstream, the Acquiring IXC must provide MTS Allstream with documentation of the Original IXC's agreement to the bulk transfer of its customer base.
- B. An Acquiring IXC requesting a bulk transfer of another IXC's customer base must provide MTS Allstream with advance notification of such request. Depending upon the size and nature of the customer base to be transferred, the specific timing of the transfer may be subject to negotiation with MTS Allstream.
- C. Charges for processing a request for a bulk transfer of another IXC's customer base are assessed to the Acquiring IXC. The charges consist of two components, a basic charge per request and a variable charge per access line PIC selection transferred.

D. Rates And Charges

- (1) Basic charge, each request
- (2) Variable charge, each access line

	<u>Charge</u>

D. Compensation for Traffic Terminations

1) Termination of CLEC Intraexchange Traffic

For traffic that is interchanged between a CLEC and MTS Allstream and terminated within the same exchange, traffic imbalance may occur. When a traffic imbalance exists, the party, either the CLEC or MTS Allstream which originates less traffic than it terminates is entitled to compensation. It is the responsibility of the party who is entitled to the compensation to detect and apply charges for the imbalance.

MTS Allstream will notify the CLEC when an imbalance is detected in MTS Allstream's favour. The monthly rates specified below apply, for each trunk required at the busiest hour of the month, on the basis of actual traffic imbalances from the date of notification of the imbalance, for as long as the imbalance exists.

For traffic imbalance of	<u>Monthly Rate</u>		
	<u>greater than than 20%</u>	<u>greater than 40%</u>	<u>greater than 60%</u>
up to 24 trunks, each trunk	\$ 4.99	\$ 8.31	\$11.68

D. Compensation for Traffic Terminations - continued

2) Delivery of CLEC Traffic within MTS Allstream's EAS Areas

CLEC traffic originated in an exchange can be delivered to MTS Allstream's subscribers in other exchanges that have EAS with the originating exchange, via separate one-way or two-way trunks interconnected to the gateway in the originating exchange.

If one-way trunks are used, the CLEC is responsible for all costs associated with provisioning the trunks between its gateway and MTS Allstream's gateway, due to the unidirectional nature of the connection. In addition, the service charges and trunk termination charges specified below apply to the one-way trunks.

If two-way trunks are used, the CLEC shares with MTS Allstream the costs of provisioning the trunks between its gateway and MTS Allstream's gateway, due to MTS Allstream's ability to route traffic from its subscribers within the EAS area to the CLEC over these trunks. In addition, one-half of the trunk termination charges specified below apply to each of the trunks in the two-way trunk group. Service charges do not apply.

	<u>Monthly Rate</u>	<u>Service Charge</u>	
Order Processing, each order	N/A	\$120.77	*
